

CALCULATE function

CALCULATE

Evaluates an expression in a context that is modified by filters

=CALCULATE(Expression, [Filter1],[Filter2],...)

Name of an **existing measure** or a **DAX** formula for a valid measure

Examples:

- [Total Orders]
- SUM('Returns Data'[Return Quantity])

A Boolean (True/False) expression or a table expression that defines a filter

Examples:

- 'Territory Lookup'[Country] = "USA"
- Calendar[Year] <> MAX(Calendar[Year])

Note: these require fixed values or aggregation functions that return a scalar value (you cannot create filters based on measures)
