# Time Intelligence Patterns

Time Intelligence Patterns

Time Intelligence patterns are used to calculate common date-based comparisons

Performance To-Date

=**CALCULATE**(Measure, **DATESYTD**(Calendar[Date]))

DATESYTD for years
DATESQTD for Quarters
DATESMTD for Months

Previous Period

=**CALCULATE**(Measure, **DATEADD**(Calendar[Date], -1, **MONTH**))

Select interval(Day, month, quarter, year)
& no of intervals to compare.

Running Total

=**CALCULATE**(Measure, **DATESINPERIOD**(Calendar[Date], **MAX**(Calendar[Date]), -10, **DAY**))
